

The Ergo Advantage modular tile has been designed with 5S requisites in mind

1 Sort

The first step in making things cleaned up and organized

2 Set in Order

Organize, identify and arrange everything in a work area

3 Shine

Regular cleaning and maintenance

4 Standardize

Make it easy to maintain - simplify and standardize

5 Sustain

Maintaining what has been accomplished

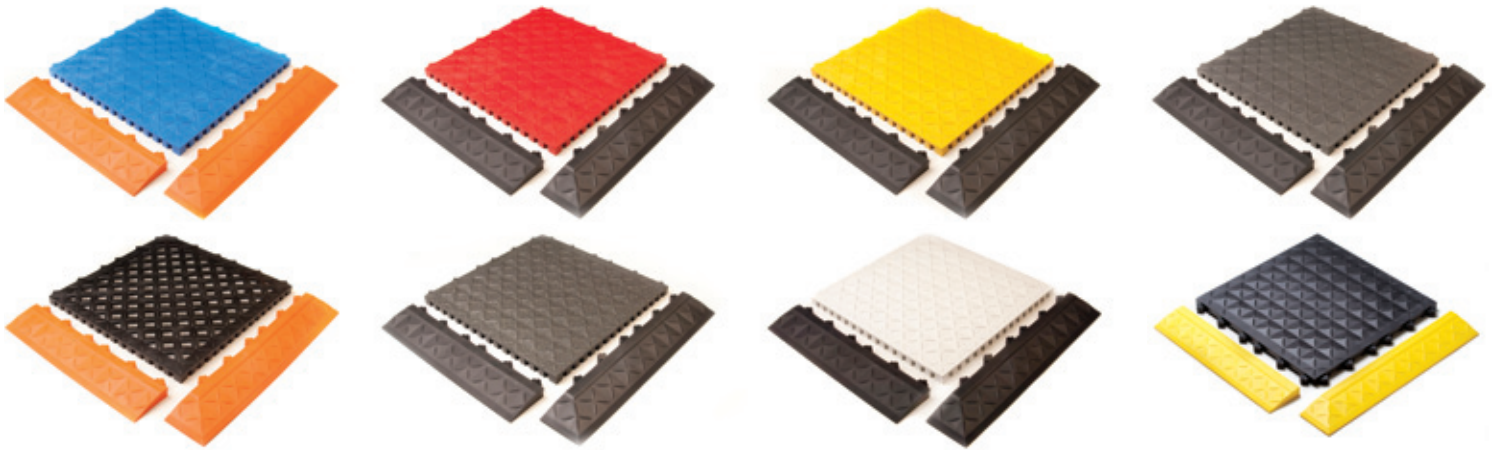

Benefits

- The tiles easily lock together to organize an area rather than having mats placed sporadically on the floor.
- A partial or entire area can be covered without taping or sliding.
- Custom design the work area to avoid negative ergonomic effects of employees travelling on and off mats.
- Different color options allow your company to identify and arrange your work areas.
- Maintenance is not a problem with the Ergo Advantage tile. The tiles can be power washed and won't collect dust like most foam mats.
- Standardization with Ergo Advantage tiles help maintain a consistent appearance throughout the plant. The yellow safety border makes the statement that your facility is serious about safety.
- Companies are proud to host plant tours once they have standardized with Ergo Advantage. With our 20 year durability, sustainability of this product is effortless. Edges won't curl, and the product is easy to reconfigure as lines change. As our name suggests, mats are no longer going to the landfill every couple of years.
- So to maintain 5S standards in your plant, you can be confident, Ergo Advantage has you covered.

Ergo Advantage: Colour Tiles and Edges

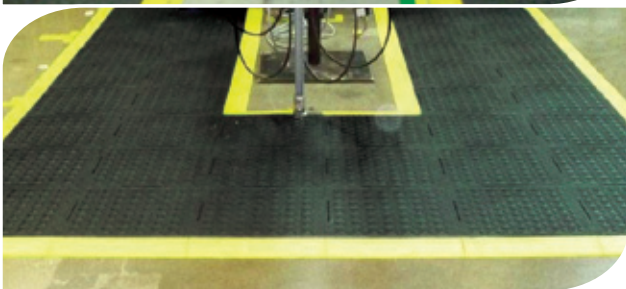

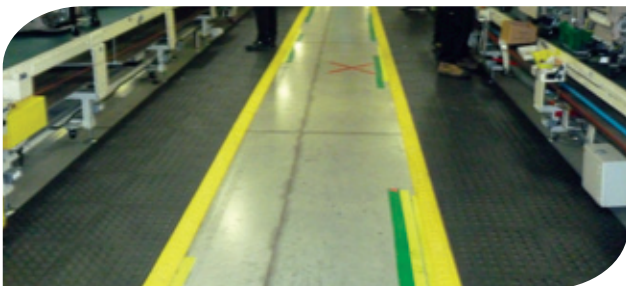

- Both tiles and edges can be used for distinguishing special areas of the workplace.

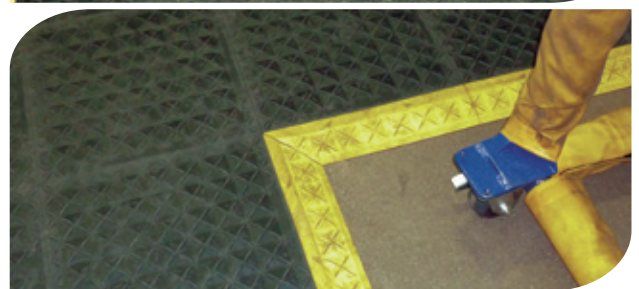

Take Advantage of the Flexibility.

- The flexibility of the interlocking system allows the tiles to be re-configured when changes are made to the work area.
- The interlocking system can be staggered.
- The tiles stay together when wanted and come apart when needed.

Form-fit Work Stations

The tiles can be assembled to accommodate larger or small areas.

The tiles can be assembled to incorporate right angles, long lines, and smaller work cells.

The Next Step Forward.

The leg structure on the underside of the tile disperses the user's weight evenly, so their energy is not transferred to the hard surface below.
